CRAFT

FREE GUIDE

Craft Anything: Claude rebuilds what you *show it*

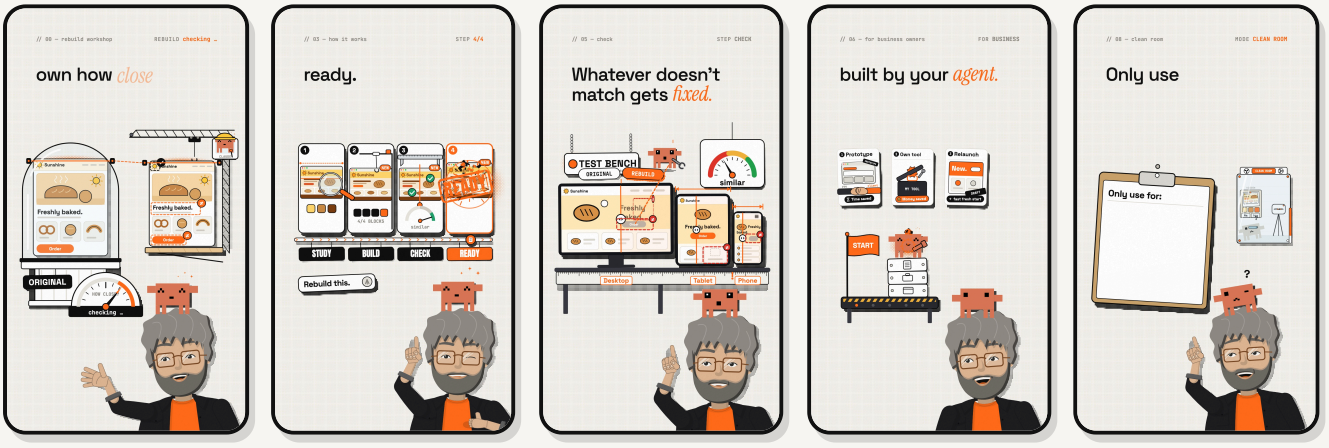

Where to get Craft Anything, how the four steps work, how to connect it to Claude Code, and what you can do with it as a business owner.

// 01

At a glance

QUESTION	SHORT ANSWER
What	The 14th Crafting App by ArtCraft: studies how a website, app or game works and has a coding agent build your own version
Who builds	Claude Code on your computer, with your own sign-in
Flow	Study → Build → Check → Ready
Check	Websites are compared with the original at three screen widths and refined
For agents	284 tools, each a command-line command and an MCP tool
Licence	Apache-2.0, free
Maturity	Early alpha, version 0.2.0 from 1 November 2026

// FROM THE VIDEO

// 02

How it works

1. **Study:** Craft Anything looks at the target: its pages at every width, layout, colours, fonts, spacing, how it behaves.
2. **Build:** a coding agent builds a new project in the language or framework you name. Games also in Unity, Unreal or Godot.
3. **Check:** the result is compared with the original. Whatever doesn't match yet goes on a list.
4. **Ready:** open the result, or say what should change, and it gets refined.

In simple mode you just pick a website, app or game, describe what you want and press Start. The project page shows the four steps, what the agent is doing, its questions, and how alike the

result already is.

// 03

Clean room or Deep

- **Clean room (default):** nothing inside the original is read, no code, no files, no page source. Craft Anything only works with what a visitor sees: screenshots, visible text, measured layout, colours, fonts.
- **Deep (only on request):** every tool, including reading program code, explicitly for private use.

THE MENTOR SAYS

Only use Craft Anything on software you own or are allowed to examine. According to the team, it never bypasses DRM, logins or anti-cheat.

// 04

Where to get it

I don't send out any software. Only download Craft Anything from the official pages.

All Crafting Apps · getartcraft.com/apps

the official download page, Craft Anything is number 14.

// 05

Connect it to Claude Code

Craft Anything runs your own, unmodified `claude` program with your own sign-in. It never sees your account. Install and sign in to Claude Code first.

Check everything is ready:

```
craft-anything-cli doctor
```

Connect Craft Anything to your coding-agent apps:

```
craft-anything-cli setup
```

Rebuild a website straight from the terminal (questions are asked in the terminal):

```
craft-anything-cli rebuild https://your-site.com "Recreate this website"
```

Give your agent all 284 tools via MCP:

```
claude mcp add craft-anything -- craft-anything-cli mcp
```

Check: type `/mcp` in Claude Code, Craft Anything must show as connected. New projects go into `Documents/Craft Anything`.

// 06

What you do with it as a business owner

SITUATION	WHAT CRAFT ANYTHING GIVES YOU
A client wants "something like X"	A clickable prototype to talk about, instead of just sketches
You pay a subscription for a small tool	Your own version of your own workflow that belongs to you
Your website is old	A relaunch draft, built from your existing site
You want to understand how a tool is built	An analysis with evidence, without building anything ("Just look inside")

Important: the result is a starting point, not a finished product. Check it before you show it to clients.

// 07

Prompts to copy

Your own website as a relaunch draft:

```
Study my website [address] in clean room mode and build a modern version with
[framework]. Keep the content and structure, make the design calmer and mobile first.
Show me what still doesn't match at the end.
```

A prototype for a client (only with their permission or from your own sketches):

```
Build a clickable website prototype from these screenshots [files]. Don't use any
third-party logos, photos or text, only placeholders.
```

Your own small tool instead of a subscription:

```
I use a tool for [task]. Build me a simple version of my own with these features:
[list]. Local, no account, the data stays on my computer.
```

// 08

Limits and risks

- **Early alpha:** building with API keys and coding agents other than Claude Code has not been run live yet, according to the team.
- **Rights:** a rebuild from what a visitor sees is still not a free pass. Third-party logos, photos, text and distinctive designs can be protected. Only rebuild what you own or have permission for. Not legal advice.
- **Deep mode:** only for your private use and only on software you're allowed to examine.
- **Cost:** building runs on your Claude account and uses your plan's limits.
- **Speed:** new versions arrive almost daily. Check the README of the current version.

// 09

Your first hour

- [ ] Install Claude Code and sign in.
- [ ] Download Craft Anything from getartcraft.com/apps or the GitHub releases.
- [ ] Run `craft-anything-cli doctor` .
- [ ] Study and rebuild your own website in simple mode.
- [ ] Look at the result at three widths and ask for one change.
- [ ] Optional: add the MCP server in Claude Code and check it with `/mcp` .

// 10

My tip

Start with your own website. You own all the rights, you know the original exactly, and you see right away how good the rebuild is. And a draft like that is often the fastest way into a relaunch.

All links, commands and numbers checked on 1 November 2026 in the README and on getartcraft.com.

THE MENTOR SAYS

In the next reel: your own agent office, on your own computer or your own server.
