

The buying checklist for your *cordless vacuum*

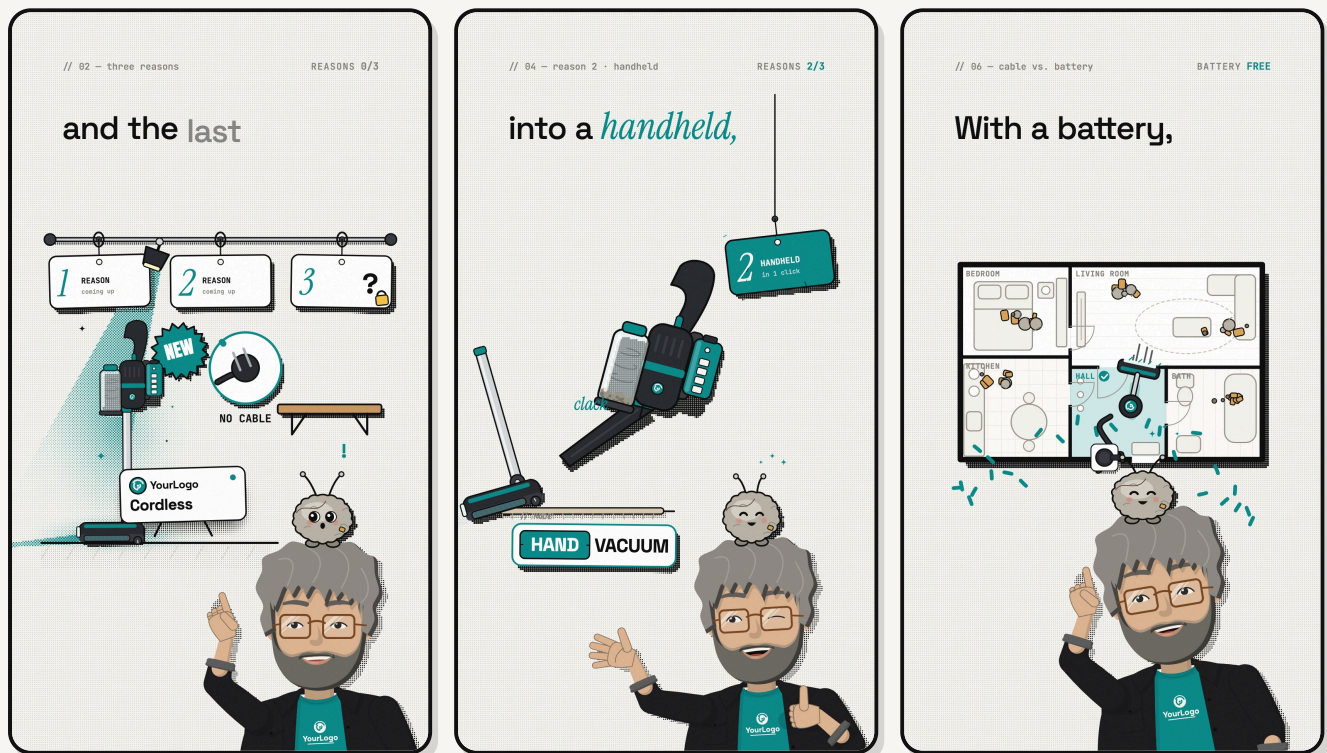

Want to get rid of the cable? Here are the three reasons from the reel as questions to ask any vacuum, a checklist to tick off before you buy, a quick in-store test and three care tips so your vacuum lasts.

// 01

The 3 reasons at a glance

NO.	REASON	WHAT TO LOOK FOR	YOUR QUESTION IN THE STORE
1	Swappable battery	The battery comes off without tools, and a second one is sold separately	"Can I buy a second battery and just swap it?"
2	Handheld in one click	Wand and floor head come off in one move, crevice and upholstery tools included	"How fast does it turn into a handheld for the sofa and the car?"
3	One-button bin	The bin opens over the trash without you reaching into the dust	"Do I have to touch the dirt anywhere when I empty it?"

// FROM THE VIDEO

// 02

Checklist before you buy

- ☐ The battery is swappable, and a second battery is sold separately.
- ☐ The run time is listed for the lowest and the highest setting in the manufacturer's specs. Compare both numbers, not just the best one.

- ☐ The charging time fits your routine (with two batteries it hardly matters).
- ☐ The floor vacuum turns into a handheld in one click.
- ☐ Crevice and upholstery tools are included, for the sofa, the stairs and the car.
- ☐ The dust bin empties straight into the trash at the push of a button.
- ☐ The filter is washable, and replacement filters are easy to get.
- ☐ It feels good in your hand, even overhead, on the ceiling or on the curtains.
- ☐ The floor head has a light, so you can see dust under furniture.
- ☐ There is a wall mount or charging dock, so it stays within reach.
- ☐ Warranty and spare parts (battery, brush roll, filter) are available for a few years.

THE MENTOR SAYS

Don't buy the longest run time. Buy the battery you can swap.

// 03

How to test it in the store

1. Hold it for a minute as if you were vacuuming under the sofa. If it gets heavy, it's the wrong one.
2. Take off the wand and put on the crevice tool. If that works with one hand, it works at home too.
3. Take the battery off and put it back on. Make sure it clicks firmly into place.
4. Ask them to show you how the bin is emptied. If you have to reach in, it doesn't deliver reason number three.
5. Ask for the price of a second battery and replacement filters **before you buy**.

// 04

Make it last

- **Wash the filter regularly** and let it dry completely before you put it back.
- **Cut hair off the brush roll** as soon as it wraps around it. That protects the motor.

- **Don't store the battery in the heat** (for example, don't leave it in a hot car). Your vacuum's manual has the exact instructions.
